SYSTEM ARCHITECTURE

INTRODUCTION

In the modern digital era, there is a growing need for robust online systems to streamline administrative functions in law enforcement. Traditional crime filing involves a lot of paperwork, delays, and limited accessibility. Our project, the **Online Crime File Management System**, aims to address these issues by providing a web-based platform that allows citizens to file complaints online and enables the administration to monitor, manage, and respond to these complaints efficiently. This system improves accessibility, reduces processing time, and ensures better record-keeping.

OBJECTIVES

- To design a secure and efficient online system for lodging and managing crime complaints.
- To digitize the crime reporting process for easier access and management.
- To ensure citizens can file complaints related to theft, missing persons, and other issues at any time.
- To provide an admin dashboard that enables monitoring of all registered complaints.
- To develop a database that stores and manages details of victims, suspects, and complaint statuses.
- To reduce paperwork and physical visits to police stations unless necessary.

KEY FEATURES

- Online Complaint Registration
- User & Admin Login System
- Complaint Status Tracking
- Victim and Suspect Information Management
- Admin dashboard for Complaint Management

ER DIAGRAM

MODULES OVERVIEW

User Module:

- New user registration
- Login/logout system
- File complaint with relevant information
- View complaint history and status

Admin Module:

- Admin login
- View all complaints with filtering options
- Update complaint status (in-process, resolved, rejected)
- View details of victims, suspects
- Manage user data

SYSTEMS ARCHITECTURE

The Online Crime File Management System is designed with a **three-tier architecture**, ensuring efficient separation of concerns and scalability:

1. Presentation Layer (Front-End):

1. **Technologies Used:** HTML, CSS, JavaScript (with JSP for dynamic content)
2. **Functionality:** Provides the user interface for users and administrators to interact with the system. This includes forms for submitting complaints, viewing statuses, and administrative dashboards.

2. Application Layer (Back-End):

1. **Technologies Used:** Java (Servlets, JSP)
2. **Functionality:** Handles the core logic of the application. It processes user inputs from the Presentation Layer, interacts with the Database Layer to retrieve or store data, and returns the appropriate responses to the user interface.

3. Database Layer:

1. **Database Management System:** MySQL
2. **Functionality:** Manages data storage, retrieval, and manipulation. It stores information related to users, complaints, FIRs, missing persons, and wanted individuals.

FUTURE SCOPES

- **Mobile Application Integration** – Develop Android/iOS apps for broader accessibility.
- **Real-time Notifications** – SMS/Email alerts for complaint status updates.
- **AI & Data Analytics** – Predict crime trends and provide insights for authorities.
- **Advanced Security Features** – Two-factor authentication and encryption.
- **Integration with Police Databases** – Direct linkage with official law enforcement systems.

DATA TABLES & PURPOSE

Type 'help;' or '\h' for help. Type '\c' to clear the buffer.

```
mysql> show databases;
+-----+
| Database |
+-----+
| information_schema |
| crime_manage |
| mysql |
| test |
+-----+
4 rows in set (0.00 sec)
```

```
mysql> use crime_manage;
Database changed
mysql> show tables;\
+-----+
| Tables_in_crime_manage |
+-----+
| complaint |
| crime_report |
| fir |
| missperson |
| visitor |
| wanted |
+-----+
6 rows in set (0.00 sec)
```

Main Tables & Their Purpose:

- **visitor** – Stores user registration and login information
- **complaint** – Contains user-filed complaints including suspect and crime type
- **crime_report** – Stores crime incident reports with suspect and incident details
- **fir** – Manages First Information Reports along with legal references
- **missperson** – Records missing person details including image
- **wanted** – Maintains details and photographs of wanted individuals

Key Fields & Table Structure:

- Each table uses a unique id as the primary key
- Common fields include: name, gender, age, address, date
- photo is stored as longblob in missperson and wanted tables
- Fields like firno, act, dis, and brief are used for legal/crime details
- Tables use the InnoDB engine with latin1 character set

FLOW CHART

CONCLUSION

- The *Online Crime File Management System* is a significant step towards modernizing and streamlining the crime reporting process. By providing a digital platform for users to file complaints and for administrators to manage them efficiently, the system enhances accessibility, transparency, and responsiveness in law enforcement communication. With secure data handling, easy complaint tracking, and centralized management, this system aims to reduce paperwork and improve the overall user experience. It lays the foundation for future upgrades like mobile integration, real-time alerts, and advanced analytics, making it a scalable solution for digital crime management in the years to come.

-
- Promotes transparency and accountability in crime reporting
 - Empowers citizens through easy access to justice
 - Developed with clean UI, strong backend, and secure data handling
 - A practical, innovative, and future-ready solution by our team

USER INTERFACE SCREENS

The screenshot shows a web browser window with the address bar displaying 'localhost:8080/Crime_File_Management_System/com.jsp'. The page has a dark blue background and a header with a 'Sign in' button. Below the header, there is a large, empty rectangular area with a dashed border. The main content area features the title 'Add Complaint' in white text. Below the title, there are five form fields, each with a label and a corresponding input area:

- User Name :** A text input field with the placeholder text 'Your Name'.
- Details Suspect :** A text input field with the placeholder text 'Detail of Suspect'.
- Description :** A larger text input field with the placeholder text 'Description'.
- Date of Complaint :** A date input field with the placeholder text 'dd-mm-yyyy' and a calendar icon.
- Type Of Crime :** A dropdown menu with 'Civil' selected and a downward arrow.

Below these fields is a green 'Submit' button. The browser's taskbar at the bottom shows various icons, including the Start button, Search, and several application icons. The system tray on the right indicates the time as 15:18 on 15-12-2023.

The screenshot displays a web browser window with the address bar showing 'localhost:8080/Crime_File_Management_System/crime_re.jsp'. The page features a 'Witness Report' form with the following fields:

- Suspect Name :
- Informer name :
- Informer Address :
- Description :
- Date of Report :

A green 'Submit' button is located at the bottom of the form. The browser's taskbar at the bottom shows various application icons, and the system tray on the right indicates the time as 15:26 on 15-12-2023.
